Professional IoT Services

Customer

Gemalto brings trust to an increasingly connected world and is at the heart of modern life, from payment to enterprise security and the internet of things. It delivers easy to use technologies and services to businesses and governments, authenticating identities and protecting data at rest and in motion so they stay safe. Gemalto's M2M / IoT solutions enable services in personal devices, connected objects, the cloud and in between. Gemalto authenticates people, transactions and objects, encrypt data and create value for software – enabling its clients in more than 180 countries to deliver secure digital services for billions of individuals and things.

Challenge

In our connected world it is essential that communication units work reliably and comply with standards and operator requirements. This calls for extensive testing under realistic conditions.

Solution

The Vodafone Innovation Park in Düsseldorf provided an ideal environment to certify Gemalto's Cinterion® modules based on Vodafone global requirements. Its Radio Reference Room offers all current Radio and Core technologies to verify Gemalto's M2M modules. The test outcome was a positive report resulting in the certification, which confirms that Cinterion® wireless modules work as expected and are ready for use in Vodafone's Global Network.

Benefit

"Vodafone Innovation Park Labs provide a realistic multi-vendor test environment for us and offer services to approve our product developments." says Axel Hansmann, VP Strategy and Marketing M2M at Gemalto. "We value the possibility to verify our Cinterion® modules against the latest technologies and features."
